

Soundshape by Speaksee

Live translation and captioning for all your events

Real-time captioning and translation, without barriers

Soundshape makes events accessible for deaf and hard-of-hearing visitors as well as for an international audience. Visitors follow live captions and translations on their own device or via large screens in the room. **Let everyone—regardless of language or disability—actively participate in your event.**

Scan the QR code and follow instantly

Visitors simply scan a QR code and read along live on their own smartphone or tablet.

Display captions on screen

Show live captions clearly on large screens in the venue.

MORE THAN 100 LANGUAGES

Available on screens, smartphones, and livestreams.

Works seamlessly with existing AV systems.

group

PLUG-AND-PLAY INSTALLATION

Up and running within minutes, without additional staff or technical support.

FULL CONTROL

Display translations exactly the way you want: on screens via HDMI, on smartphones or tablets via a QR code, or online during a livestream.

EAA COMPLIANT

The European Accessibility Act requires accessibility in an increasing number of situations.

Specifically developed for auditoriums

Soundshape® 1 Pro delivers **consistent, reliable captioning and translation** at every event. Full control via the web app, either in advance or live, **without operational complexity**.

The demand for translation is growing. Solutions are falling behind.

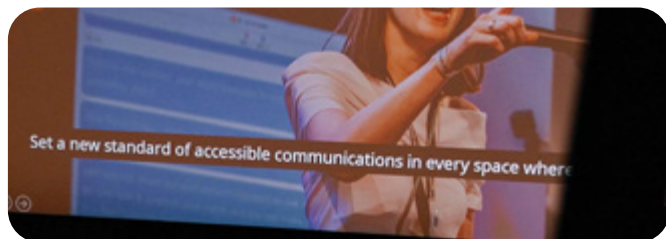

- For 10–15% of the population—deaf and hard-of-hearing people or visitors who do not speak the language—communication barriers are a daily reality
- With the European Accessibility Act, live captioning and translation are no longer optional, but mandatory.
- At the same time, many solutions prove impractical and difficult to deploy for daily use.

With Soundshape, accessibility becomes second nature.

Custom dictionary

Preload uncommon words, names, and abbreviations for even better recognition.

Data security

GDPR-, CE-, and ISO-certified, with encrypted EU servers. Data is automatically deleted after the event.

Accent-independent

Reliable speech recognition, regardless of accent, pronunciation, or speaking style.

Industrial-grade hardware

Professional 19-inch rack server, designed for demanding environments.

AV controller compatible

The only AI translation solution that integrates seamlessly with common AV controllers such as Extron, Crestron, and AMX.

Transcript download

Export your session as a text or .SRT file for video captioning, archiving, or further AI processing.

Dante® compatible

Compatible with Dante® via a simple dongle. Easy to connect to existing networks and AV infrastructure.
